

Details: Ordering VBUCK® Shapes

Ordering Shaped VBUCK® Products:

1A. Half round or round window

Determine diameter across in inches.

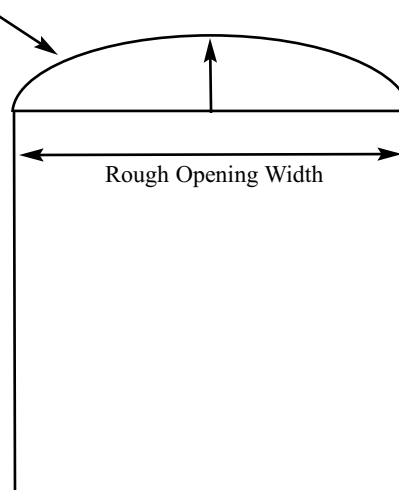

Note: The cost of the bend is the above measurement multiplied by \$2.60 less the discount factor. For a full round opening, you will multiply by two. For half round or full round we only need the diameter.

Radii method: Measure radius and include R/O width.

1B. Eyebrow and Arched windows

Determine Radius or Springline from center of eyebrow. Include rough opening width.

Note: For elliptical, oval, or gothic shapes, send template.

Springline or Rise method: Measure from springline to top of eyebrow at center and include R/O width.

2. Determine ICF width (This is the outside dimension of the ICF Block, i.e. 9 ¼, 11, 11 ½ inches).

3. Fax order to Vinyl Tech. office: 435-750-6948

Note: For additional fastener pullout strength, cellular PVC (Part number 2536) can be added before the shapes are fabricated.

Freight charges on shaped items can vary greatly due to diameter, weight or quantity.
